Step 1

Clip the side rails on to the end pieces.

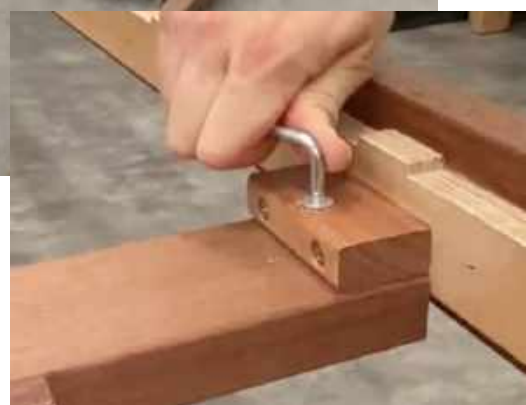

Note: the brackets are designed to be tight, it may require a firm tap on top of the side rail to ensure they are fully seated.

Floating Base

Rest both side rails on the cross beam, then attach the front piece.

Next, wind the 2 screws in with the Allen key.

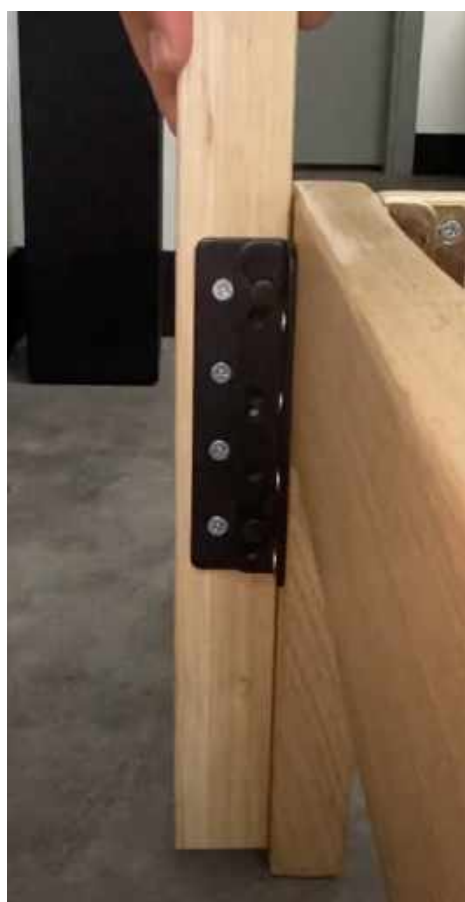

Note: you may notice a small gap on each corner - this is an essential design feature to stop any potential wood-on-wood squeak!

Step 2

Place the centre beam in the slots, then wind the leg down until it just touches the floor.

Step 3

Clip in the headboard support beams, then clip on the headboard (again, the brackets may be tight).

Note: the support beams are not designed to fully reach the ground.

Step 4

Starting in the middle, place the slats in, and you're done!

Note: the slats are designed be loose (again, to prevent squeaking).

Warranty & Care

- Lifetime Guarantee against any break or squeak, we'll also pay all shipping in the first 2 years.
- Nothing you need to do: we use a water-resistant, natural vegetable oil finish that lasts.
- Can be cleaned with a damp cloth and mild soap if required.
