## Step 1

Unzip and stretch out the cover on your bed

## Step 2

Roll out the first layer and cut the packaging off

Tip:

It can help to fold the layer to remove the packaging underneath

## Step 3

Important: Align the layer evenly inside the cover on all sides (don't worry if the cover seems too small, as the latex stretches/compresses)

### Step 4

Align each layer with the layer below it

Tip:

A 'wave' motion helps to move each layer (it will shift away from you)

### Step 5

Now zip up the cover - it should be nice and tight!

Tip:

If the layers have bunched up on one side, 'wave' the mattress to realign them

### Warranty & Care

- 20-year warranty against sagging.
- No need to rotate and do not flip.
- Spot clean cover with mild soap or cold hand-wash only. Air-dry.
- Mattress protector recommended.
